The elephant in the room

Intune Plan 1

Included in EMS E3 or Microsoft 365 E3, ME5, F1, F3, and Business Premium plans

- Cross-platform endpoint management
- Endpoint security built in
- Endpoint analytics
- App protection policies
- Shared device management
- Device compliance
- Risk and app based conditional access
- Proactive remediation

Intune Suite

Add to Plan 1 to utilize these solutions*

- Remote Help
- **Endpoint Privilege Management**
- Advanced Analytics
- Enterprise Application Management
- Cloud PKI
- [All Intune Plan 2 features](#)

Prerequisite

- Intune Plan 1

Intune Plan 2

Add to Plan 1 to utilize these features

- Tunnel for Mobile App Management
- Mobile firmware update management
- Specialty device management
- Multiple managed accounts (future)

Prerequisite

- Intune Plan 1

**Also available as individual add-ons
aka.ms/IntuneSuitePricing*

What is the problem?

Running as a standard user reduces the attack surface...

- Zero Trust Framework
 - Least Privilege Access

Impact on user productivity...

- Standard users can't do everything

How does it work?

Source: Ooms, R. (2023, May 31). The Virtual Account that rocks the EPM! Call4Cloud from <https://call4cloud.nl/virtual-account-epm-elevation/>

How does it work?

EPM Elevated Account

The moment EPM gets installed, a new virtual admin account

Creating the Virtual Account

To create the virtual account it uses the LsaManageSidNameMapping

A Virtual Domain?

Besides the virtual account, a virtual domain: MEM will be created (requirement to create the account)

Virtual Account Created

Virtual account is created: username\$

Virtual Account Login

The virtual account uses the **LogonUserExEx API** (NEEDS DOMAIN (MEM) AND USERNAME to login) and the NOT documented **LOGON32_PROVIDER_VIRTUAL** for the virtual account to login

Profile Creation

When logging in the profile gets created and the attributes are changed to hide it

Source: Ooms, R. (2023, May 31). The Virtual Account that rocks the EPM! Call4Cloud from <https://call4cloud.nl/virtual-account-epm-elevation/>

Getting started with EPM!

1. Get a license
2. Deploy an “*elevation settings policy*”
3. Deploy “*elevation rules policy*”

Don't reinvent the wheel - Reports

The screenshot displays the Microsoft Intune admin center interface. The browser address bar shows the URL: https://intune.microsoft.com/#view/Microsoft_Intune_Workflows/SecurityManagementMenu/~epm. The page title is "Endpoint security | Endpoint Privilege Management". The left navigation pane includes a search bar and a list of categories: Overview, All devices, Security baselines, Security tasks, Manage, Antivirus, Disk encryption, Firewall, Endpoint Privilege Management (highlighted with a red box), Endpoint detection and response, App Control for Business (Preview), and Attack surface reduction. The main content area is titled "Reports" and contains five report tiles: "Elevation report" (See all elevations, both managed and unmanaged by elevation policies), "Managed elevation report" (See the status of elevations that occurred inside the elevation management policies), "Elevation report by applications" (See all elevations, both managed and unmanaged by application), "Elevation report by Publisher" (See number of elevations by each Publisher), and "Elevation report by User" (See number of elevations by each User).

Deployment considerations for Endpoint Privilege Management

What can go wrong...

The screenshot shows a web browser displaying the Microsoft Intune documentation page. The page title is "Deployment Considerations and frequently asked questions for Endpoint Privilege Management". The breadcrumb trail is "Learn / Microsoft Intune / Intune service /". The page includes a left-hand navigation pane with a search bar and a list of topics under "Microsoft Intune documentation". The main content area has a heading "Deployment Considerations and frequently asked questions for Endpoint Privilege Management" and a subheading "In this article". Below this, there is a "Note" box stating: "This capability is available as an Intune add-on. For more information, see [Use Intune Suite add-on capabilities](#)." The main text begins with "With Microsoft Intune Endpoint Privilege Management (EPM) your organization's users can run as a standard user (without administrator rights) and complete tasks that require elevated privileges. Tasks that commonly require administrative privileges are application installs (like Microsoft 365 Applications), updating device drivers, and running certain Windows diagnostics." The page also features a right-hand sidebar with "Additional resources" including "Training" (Explore advanced protection methods - Training) and "Documentation" (Prerequisites for Microsoft Entra Cloud Sync in Microsoft Entra ID - Microsoft Entra ID). The page footer includes a "Download PDF" link.

Note

This capability is available as an Intune add-on. For more information, see [Use Intune Suite add-on capabilities](#).

With Microsoft Intune **Endpoint Privilege Management (EPM)** your organization's users can run as a standard user (without administrator rights) and complete tasks that require elevated privileges. Tasks that commonly require administrative privileges are application installs (like Microsoft 365 Applications), updating device drivers, and running certain Windows diagnostics.

Endpoint Privilege Management supports your zero-trust journey by helping your organization achieve a broad user base running with least privilege, while allowing users to still run tasks allowed by your organization to remain productive.

The following sections of this article discuss deployment considerations and frequently asked questions for EPM.
